

Student should fill the **Concluded/Correct** percentage

<b>Minimum functionality enough to pass</b>	<b>10 Values</b>	<b>Concluded/Correct (100 %)</b>
Implementation of a clipboard that accepts multiple simultaneous local connections: clipboard_connect, clipboard_copy, clipboard_paste		
<b>Synchronization</b>	<b>+1 value</b>	<b>Concluded/Correct (100%)</b>
Definition of the various critical regions and implementation of correct synchronization		
<b>Efficient synchronization</b>	<b>+1 value</b>	<b>Concluded/Correct ( 90 %)</b>
Implementation of synchronization on the critical regions guaranteeing that they are the shortest possible		
<b>Clipboard_wait</b>	<b>+1 value</b>	<b>Concluded/Correct ( 100 %)</b>
Correct implementation of the clipboard_wait function		
<b>Connection to another clipboard</b>	<b>+1 value</b>	<b>Concluded/Correct ( 100 %)</b>
Implementation of the -c option, basic replication of the data among the various clipboards Detection of disconnect e correct execution afterwards		
<b>Correct replication among clipboards</b>	<b>+1 value</b>	<b>Concluded/Correct ( 100 %)</b>
Implementation of a correct synchronization algorithm that guarantees the consistency of the data when two simultaneous copies occur in different clipboards		
<b>Errors treatment</b>	<b>+1 value</b>	<b>Concluded/Correct ( 90 %)</b>
Verification, correction and report of communication errors Verification, correction and report of execution errors on the clipboards		
<b>Correct Resources management</b>	<b>+1 value</b>	<b>Concluded/Correct ( 100 %)</b>
Correct management (destruction) of threads, sockets, memory		
<b>Code structure</b>	<b>+1 value</b>	<b>Concluded/Correct ( 100 %)</b>
<b>Report</b>	<b>+1 value</b>	<b>Concluded/Correct ( ____ %)</b>
<b>Discussion</b>	<b>+1 value</b>	<b>Concluded/Correct ( ____ %)</b>
<b>Incorrect implementation of the API</b>	<b>-1..0 values</b>	<b>Concluded/Correct ( ____ %)</b>
